Services Performed / Scope of Work

The scope of the Perry Point VA Medical Center project includes the renovation of existing hospital rooms, nurse's station, and medical and business offices. Demolition took place within the existing spaces to make way for new mechanical, electrical and architectural systems. The renovations were conducted within a fully operational hospital. Through careful project pre-planning, the Team developed a four-phase plan that helped minimize impact on employees, patients and visitors as well as ensure safety throughout the facility.
